Targets Aging & Inflammation Pathways

Cateus combines two of the most important herbs in Indian Ayurveda: Indian gooseberry (*emblica officinails* a.k.a. ‘amla’) and turmeric (*curcuma longa*). They have been used for millennia as a general wellness tonic and modern science has

discovered skin and eye health benefits. Researchers are discovering how the herbs in Cateus help the body resist “gerontogens” or factors that accelerate aging. Each tablet of Cateus contains 100mg of full-spectrum Indian gooseberry berry extract plus 100mg of Alleppey turmeric extract.

Cell Protection, Cholesterol & Joint Support

- Protects cells against damage ¹
- Supports healthy cholesterol & triglyceride levels ²
- Protects cartilage & supports comfortable movement ^{3,4}
- Boosts natural antioxidant levels ⁵

Targets Pathways That Accelerate Aging

It is commonly accepted that aging happens after many years of accumulating molecular damages due to reactive oxygen species (ROS) and DNA replication errors. Some scientists believe that low-grade inflammation accelerates aging and that inhibiting certain genetic pathways may slow aging.⁶ The active ingredients in Cateus act on aging pathways and may reduce inflammatory proteins.^{7,8}

Indian Gooseberry

Promotes a Healthy Inflammatory Response

Inflammation is our immune system’s response to foreign organisms such as a virus or tissue damage caused by injury or overuse. Cateus regulates inflammatory proteins that, in excess, can cause swelling and feelings of discomfort.⁹ Experiments on animals suggest that Indian gooseberry can help regulate both short and long-term inflammation.¹⁰

Turmeric

Supports Skin & Eye Health

The Indian gooseberry in Cateus may also help shield human skin cells from damage caused by UV rays.¹¹ A recent review of published studies on turmeric found evidence it supports skin health and can help with a wide range of different skin blemishes.¹² The turmeric in Cateus also helps the body maintain eyesight and eye health.¹³
