Relief for Pets, Peace of Mind for Owners

Pharmaceutical painkillers and antidepressants can have significant side effects on pets. People everywhere are embracing a holistic lifestyle & are seeking the best natural alternatives for their pets. CBD is emerging as the #1 favorite of dog, cat, bird & livestock owners.

Natural Endocannabinoid Support

Phyto Pets CBD extracts give pets of all sizes relief and pet owners peace of mind. The first-ever CBD product that is not made from hemp, Kriya® Hops is made from the flowers of Asian hops (*Humulus yunnanensis*) vine. The patented, hybrid Kriya® Hops vines (US patent #PP31,477 P3) are naturally 100% THC-free and legal worldwide. Large doses of full-spectrum hemp or cannabis CBD (which contains small amounts of THC) can cause tremors, anxiety and other unpleasant side effects in pets.¹ Kriya® Hops have been tested at up to 76% more bioactive than hemp CBD.²

Gentle, Effective & Versatile

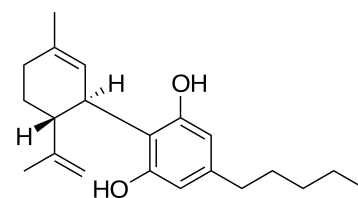

All animals with a spine have an endocannabinoid system and it can become imbalanced with old age, stress or illness. CBD may help support a healthy endocannabinoid balance. Researchers at Cornell University found that dogs with arthritis who took CBD oil twice daily showed a significant decrease in pain and increase of activity.³ A 2019 study of CBD on dogs with epilepsy uncovered evidence that higher CBD blood levels may cause a lower frequency of seizures.⁴ An online survey of 2000+ licensed veterinarians in the U.S. suggested that the following conditions may be suitable candidates for CBD supplementation:⁵

- Pain
- Arthritis
- Seizures
- Gastrointestinal issues
- Anxiety & mood issues
- Tumors
- Motion Sickness
